BR-001	Links in Footer Missing `href` Tag	Footer Link Validation (TC10)	Medium	Open	Medium	Himanshu Arya	April 1, 2025	Production	TC10

Bug Details

Bug ID	Description	Steps to Reproduce	Expected Result	Actual Result	Workaround
BR-001	Footer links were missing the `href` attribute, making them non-functional and causing them to be skipped in the test.	1. Navigate to homepage. 2. Scroll to footer. 3. Inspect HTML code. 4. Identify links without the `href` attribute. 5. Observe that these links are skipped in the test.	All footer links should have a valid `href` attribute to ensure they are clickable and functional & we have 109 links.	27 footer links were missing the `href` attribute, making them non-functional during the test case execution.	Manually inspect and add missing `href` attributes to the links to make them functional.
